PROFESSIONAL SUMMARY

AI/MLOps Engineer with 5+ years of commercial production experience in building LLM-powered, agentic conversational AI systems, RAG-based virtual assistants, LLM evaluation and safety guardrails, prompt engineering, API/backend integration and secure deployment of open-source LLMs (vLLM, Open WebUI) for hundreds of active users.

WORK EXPERIENCE

KI.SH - Hochschule Flensburg **01.01.2025 – Present**
AI & MLOps Engineer (Research Associate) *Flensburg, Germany*

- Built an agentic, context-aware conversational AI assistant (RAG-based Q&A over internal engineering documentation) using Qdrant hybrid search and reranking for dialogue-accurate retrieval, cutting manual search time from ~5 min to ~8 s.
- Built document-ingestion and API integration pipelines (Docling, Tesseract OCR, VLMs) feeding the conversational assistant's knowledge base, extracting text, tables and diagrams from engineering PDFs.
- Implemented LLM evaluation, monitoring and safety guardrails with DeepEval (LLM-as-a-judge) to score answer correctness, faithfulness and hallucination rate, plus MLflow tracing for production debugging and response-quality assurance.
- Spearheaded the deployment of a single-node 2xH100 server hosting open-source LLMs (e.g. Qwen3-Coder-Next) via vLLM, exposing API endpoints to serve ~500 active users.
- Deployed Open WebUI as the organization's internal conversational AI / virtual-assistant platform, integrating web search, image generation and third-party APIs, and secured access with Keycloak SSO across all local AI services.

AL-KO Geräte GmbH **01.04.2024 – 30.09.2024**
Master Thesis - Computer Vision *Kötz, Germany*

- Developed an obstacle avoidance system for robotic lawn mower by training and fine-tuning YOLOv8 instance segmentation, achieving 90.2% mAP and 87.9% recall on critical objects.
- Deployed on Raspberry Pi 5, converted model to NCNN format, reducing inference time from 1,492ms to 435ms (3.4× faster) with <1% mAP drop.

Continental AG **09.01.2023 – 31.12.2023**
Working Student - Image Processing & Tools Development *Neu-Ulm, Germany*

- Analyzed the container structures used to store vehicle simulation data and designed a field-level mapping to Continental's internal recording format.
- Implemented the conversion pipeline and filtered redundant frames to cut dataset volume, enabling evaluation of the Matrix-LED light-control algorithm against simulated night scenarios through the existing ADAS toolchain.

BLUIE **01.01.2021 – 31.07.2022**
Junior AI Engineer *Ahmedabad, India*

- Built an OCR and Data Matrix decoding system for pharmaceutical cartons, meeting packaging

compliance standards in real-time line inspection.
- Contributed to OCR pipelines using CNN-based models and computer vision techniques for extracting text from industrial images, improving accuracy from 49% to 98%.
- Exported CNN models from PyTorch to ONNX for lightweight deployment and optimized them with TensorRT to reduce inference time (<10 ms).

EDUCATION

M.Sc. Artificial Intelligence and Data Analytics **01.09.2022 – 28.10.2024**
Hochschule Neu-Ulm Neu-Ulm, Germany
Grade: 1,9

B.E. Mechanical Engineering **01.07.2017 – 31.05.2021**
The Maharaja Sayajirao University of Baroda India
Grade: 1,4

SKILLS

- **Programming:** Python (REST APIs, Microservices), SQL, API Integration
- **Data & Analytics:** NumPy, Pandas, Matplotlib, Scikit-learn
- **ML & Computer Vision:** PyTorch, YOLOv8, OCR (Tesseract), ONNX, TensorRT, CNN, Quantization, Image processing, Image segmentation
- **GenAI:** RAG, LangChain, LangGraph, Prompt Engineering, Embeddings, vLLM, Ollama, Agentic AI Frameworks, Open WebUI, Conversational AI
- **Vector Database:** Qdrant, Semantic Search, Hybrid Search (BM25 + dense), Reranking
- **MLOps & Cloud:** MLflow, DeepEval, Prometheus, Grafana, Git, Kubernetes, Docker, GitLab CI/CD, AWS (SageMaker, S3, EC2, ECR, Bedrock)

PROJECTS

MLOps Pipeline with MLflow for Wine Quality Prediction - Repository
- Developed an MLOps pipeline using MLflow to track, manage and deploy an ElasticNet regression model for predicting wine quality.
- Containerized the model using Docker and deployed it to AWS (ECR, EC2) with automated CI/CD pipelines.

CERTIFICATIONS

AWS Certified Machine Learning Engineer (Associate) - Link **02.11.2025**
Institution - Amazon Web Services (AWS)

Open Source LLMOps Solutions - Link **14.01.2025**
Institution - Duke University and Coursera

Generative AI with Large Language Models - Link **10.01.2024**
Institution - DeepLearning.AI, AWS and Coursera

LANGUAGES

English (Professional), **German** (Intermediate - B2), **Hindi** (Fluent), **Gujarati** (Native)
